In recent years, there has been an increase in the number of buffaloes and in the production of products obtained from them in the world. The expansion and increase of buffalo farming is directly related to support policies. In addition, the producers engaged in buffalo breeding should have knowledge about production, which is another factor that has an important effect in increasing populations and it is aimed to investigate the level of knowledge and resources of farmers in buffaloes breeding. The data were obtained from face-to-face interviews with 462 buffalo producers, which stand out in buffalo breeding in Turkey and which are important in buffalo production. Farmers' level of knowledge on buffalo breeding was examined. The results showed that 0.65% of farmers were very low, 3.68% low, 19.91% moderate, 54.76% high and 21% very knowledgeable. In addition, when the level of importance of information resources in terms of farmers was examined in marketing and marketing of buffalo, producer associations and agricultural organizations, private veterinarians, neighbours, village leaders, merchants and television were partly important; cooperatives, internet and fairs were not important. Radio, as a source of information for farmers, was not important at all.
