Coccinellids sampled in this study were collected from the Taurus cedar (Cedrus libani A. Rich.) at Gölcük Natural Park in Isparta and Crimean pine (Pinus nigra Arnold.) in Bilecik Şeyh Edebali University Campus. Anatis ocellata (Linnaeus, 1758) was found among the collected coccinellids and is reported for the first time in Turkish coccinellid fauna, after the identification of samples. Morphological features and taxonomic characters of this species are given with distribution and habitat notes.
